

Multi Fluid Seal

Product Description

Multi-Fluid Seal is a proprietary blend of additives selected to provide lost circulation control. It is composed of cellophane, fibers and shells to provide proper particle size distribution for application across a wide lost circulation base.

Application

Multi-Fluid Seal is to be used for the control of lost circulation in fractures and high permeable loss zones.

Typical Properties

Composition	Blended granular and flake material
Specific Gravity	.4
Moisture	maximum of 10%
Bulk Density	25 lbs per cubic foot

Recommended Treatment

Multi-Fluid Seal should be utilized in concentrations of 3 ppb to 15 ppb in the active system. Pills of 30 – 40 ppb can also be utilized.

Packaging

Multi-Fluid Seal is packaged in 30 lb (114 kg) multi-walled paper bags. Each pallet contains 50 bags and is shrink-wrapped.
